

## Description

Many of you have now been out and about in your community setting. You should review any assessments completed as a part of your Health Promotion and/or Public & Community Health classes. By this time, you should have been able to review or attend a Civic Meeting and a Professional Organization Meeting as well. If not, you should do so soon.

Based on these observations and the discussions over the past few weeks, what recommendations would you specifically make to Government Officials or Organization Leaders to improve the community or practice setting?

What do you see that your facility could put into action to improve the care it delivers? (This should be apart from your project aim if you are completing it in your area of employment.)

What is your opinion regarding who is responsible to make our communities healthier?

*Please remember that, by definition, a Discussion is a two-way activity. Students are expected, as stated in the syllabus, to engage multiple classmates on multiple points of conversation topics.*
